A hands-on Generative AI workshop — led by **DataStax** and **Amazon Web Services (AWS)** — lands in New York on 12th July! 🛠️

Join your hosts **Kiyu Gabriel** and **Antony Prasad Thevaraj**, and by the end of the session you will have...

- ◆ Created an end-to-end GenAI chatbot
- ◆ Learned all about the Retrieval Augmented Generation (RAG) pattern
- ◆ Integrated with Amazon Bedrock embedding and foundation models
- ◆ Created a vector database on DataStax AstraDB

So, want to learn how to build AI applications faster for your startup or enterprise? Register now! 📄

Ever wish that building enterprise generative AI and retrieval augmented generation (RAG) applications was a more effortless affair? 🤔

🧙‍♂️ ✨ Wish granted!

With Astra DB, developers can now use a few natural language prompts to chat with their data directly through GitHub Copilot, and build one-click RAG with unlimited scale.

This quick video explains all: <https://dtsx.io/3VICXCU>
