

# Let's Get Your School Ready...

...Changing your digital phone systems to cloud-based

## What does the BT digital telephony switch off mean for your school?

BT is turning off the analogue and ISDN network services in 2025.

This means your school's traditional telephone systems will no longer work and a move to a cloud-based solution is necessary.

## How can JSPC help?

JSPC can provide you with an efficient, cost-effective, cloud-based telephone system to replace your old BT-reliant telephone system.

Our fully managed, reliable and supported cloud-based solutions, with added benefits for your school's security, will futureproof your school. We are here to make the transition seamless and effortless. Beat the rush and arrange your school's move to a cloud-based system today.

Our cloud-based telephones have the following security features for your school...

### Safeguarding

#### Security Alerting Notifications

Push Button – A loudspeaker alert is triggered by an emergency push button. This, in turn, triggers loud ringing and visual alerts.

### Emergencies

#### Public Address Notifications

Voice Paging – One handset sends emergency announcements, as well as ringing and visual alerts, to all handsets in the school's network.

### Lockdown

#### Emergency/Safety Notifications

Ring an Extension – An emergency alert extension is available (via loud ringing and visual alert) when 900 is dialled for lockdown.

## Three hardware options...

## Two package options...
