# The best of an iPaaS, made better for utilities

SCROLL DOWN

# SET YOUR DATA FREE

We simplify the complexity of Big Data Integration so you can accelerate digital transformation. Data is at the heart of all modern enterprises and it's the most critical asset for creating a smarter and more sustainable future for us all. But everything starts with integration. It makes the analytics and insights needed for innovation possible. Data has become mission critical. We are on a mission to set it free.

> LEARN HOW

## SIMPLIFY INTEGRATIONS

Today's organizations need to move fast. System integration is the difference between success and failure. We provide a platform that simplifies the process of integrating systems with built-in, preconfigured content and accelerators. You can connect new software and deliver data-driven services in days instead of months. The result? Your organization has the speed, agility, and elastic scalability to kickstart your digital transformation.

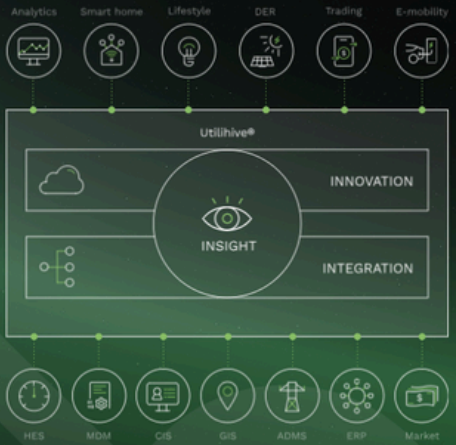

**88%**
Key integration gaps slowing down digital transformation.

**89%**
Companies struggling with data & system integration.

**90%**
Data silos persistently breaking innovation.

## TAKE ADVANTAGE OF A MODERN IPAAS

We believe the best way to solve the challenges of enterprise integration is with a modern iPaaS built on the latest architectural principles and technologies. We combine the benefits of cloud native technologies and event-driven microservices to deliver greater efficiencies, better cost benefits and increased scalability for your mission critical applications.

## ACCELERATE TIME TO VALUE

We help you accelerate the agile delivery of innovative energy services so you can be future-ready up to 80% faster and release scarce resources to drive data-inspired innovation. Benefit from preconfigured utility-specific integration content including application integrations, data orchestrations, a CIM inspired information model and data services purpose-built for the future utility.

**Preconfigured integrations**
Prebuilt integrations and an open API platform with a low code environment to make your everyday life easier.

**Prebuilt applications**
Deliver actionable insights and advanced control to operators of smart grids, smart metering and enterprise IT.

**Data services**
Accelerate innovation and data analytics with data services that help aggregate, unify, store and provision Big Data.

KMD

"The need for a more intelligent use of data to reduce energy consumption and prioritize energy-enhancing efforts is a priority currently. We are constantly looking for new partnerships that can facilitate this task and create faster, easier and cheaper access to data for our clients. The partnership with Greenbird, with its strong integration platform, can help to significantly increase the value we bring customers." Anders Ritter Bonnerup, Business Unit Director at KMD DIMA.
